

Comprehensive Behavioral Intervention for Tics (CBIT)

- Consists of an initial evaluation and 6 weekly, 60 minute sessions
- Assist clients in gaining awareness and developing strategies to minimize the symptoms of tics
- Offered to individuals starting at 7 years old and extending into early adulthood
- The program is a collaborative effort and requires the participation of both the client and their caregiver(s)
- Multidisciplinary team consists of:
 - Psychology
 - Neurology
 - Behavior Analysts
- Recent medical evaluations and treatment history will be required and if updated information needs collected, treatment will include a coordinated appointment with Neurology

Led by Morgan Voytek, LPC, BCBA
